

## CLAIMS:

1. A method of limiting access to a device, said method comprises limiting access to said device according to at least respectively a first and a second level of access, wherein said method comprises the steps of: - receiving a protection key from the rightful user of said device, said protection key comprising a combination of  
5 biometric data relating to said rightful user and shareable knowledge data, - limiting access to said device whereby a first level of access to said device can be obtained when receiving an access key comprising said shareable knowledge data in said protection key, and a second level of access to said device can be obtained, when receiving an access key comprising the combination of said biometric data and said  
10 shareable knowledge data in said protection key.
2. A method according to claim 1, wherein limiting access to the device comprises limiting access to data stored on said device, and wherein the data being accessible in said first level of access to said device is encrypted using said protection  
15 key based on the combination of said biometric data and said shareable knowledge data.
3. A method according to claim 1-2, wherein limiting access to the device comprises limiting access to data stored on said device, and wherein the data being accessible in said second level of access is encrypted using only said shareable  
20 knowledge data in said protection key.
4. A method according to claim 1-3, wherein the protection key is a word, and wherein the biometric data relates to how the word was biometrically received from the rightful user, and wherein the shareable data is the actual word.  
25
5. A method according to claim 1-4, wherein said protection key is received via a microphone.

6. A method according to claim 1-5, wherein said protection key is received via a keyboard.

7. A method according to claim 1-5, wherein said protection key is received  
5 via a touch screen.

8. A device adapted to limit access to said device, said device being adapted for limiting access to said device according to respectively a first and a second level of access, wherein said device comprises: - means for receiving a protection key  
10 from the rightful user of said device, said protection key comprising a combination of biometric data relating to said rightful user and shareable data, - means for limiting access to said device, whereby a first level of access to said device can be obtained when receiving an access key comprising said shareable data in said protection key, and a second level of access to said device can be obtained, when receiving an access key  
15 comprising the combination of said biometric data and said shareable data in said protection key.
